

Petrochemical "Zero Leakage" Canned Pump Repairs

*High pressure chem-pumps
4500 psig system pressure
following repairs and test*

Weir Services Turbomachinery Engineering provides an overhaul service for glandless pumps. An effective, economic and viable alternative to the OEM. Glandless pumps are used in increasing numbers in the handling of environmentally sensitive products such as those found in the refining, chemical and petrochemical industries.

We have many years of experience in the detailed repair and testing of 'canned stator and canned rotor' glandless pumps (on both hot and cold duties). This includes the manufacture and provision of spare rotor liners, rotor sleeves, bearings and other spare parts.

Magnetic coupling glandless pumps are also within the scope of our comprehensive repair service.

*50kW dry stator
canned glandless pump
after completion of repair*
